

How to measure your feet:

Step 1: Sit down on a chair and put both feet on a sheet of paper. Another person takes a pen and outline each foot. The pen should stand up vertically while drawing. Now stand up at the same spot on the paper and draw again with a dashed line. This is necessary to show, how your feet look like while carrying the weight of the body.

Step 2: Please sit down again on the chair. Now measure the centimeters from the ground over the instep to the ground again (A). Then measure the centimeters of the span length over the big toe to the ground (B). The last measurement should be from the ground over the foot at the big toe joint to the ground again (C). Add your normal size on the paper.

Step 3: If you will order higher shoes or boots measure the length around the ankle (D), the centimeters around the calf (E) at the height of 25 cm. For boots I also need the centimeters around the complete heel (F)

Please send the papers to Snorri Varnarsson by letter.
